Wedge Lock Conversions for Dirt Buckets
Complete Auxiliary Hydraulic Kits with Bi-Directional Two Pump Flow
Maintenance Starter Kit, Complete with Tools & Extra Cutting Teeth
Hydraulic Thumbs

We have attachments operating with over 5,000 hours that includes trouble free use, the bearings are oiled for continuous lubrication and cooling, the drive shafts are heat treated and ground for precision fit. Rex-Roth Hydraulic Motors are used which are the very best in the industry. We build our attachments to match your current thumb and quick coupler.

Productivity from one mulcher attachment to another depends on the carriers' fluid flow and all carrier manufactures vary in available flow. We match the hydraulic motor to your carrier's flow to insure you the best possible performance.

Each attachment model is designed for the carrier. Steel size and weight is increased as the carrier size becomes larger. Our attachments are designed to lift and pull the carrier; therefore the construction of the attachment must be stronger to allow for these functions.

*The only mulching attachment
featuring RDM Technology™*
